

✓ Test Plan for app.vwo.com

1. Objective

This document outlines the test plan for **app.vwo.com**, a web application designed to help users perform A/B testing and optimize their websites for better conversion rates.

The objective of this test plan is to ensure that **all critical functionalities of app.vwo.com** — including login, dashboard, account creation, and A/B testing campaign setup — are stable, secure, and provide a smooth experience for the end user (marketers, growth teams, and CRO professionals).

2. Scope

✓ Features to Be Tested:

- Login Page (Authentication, Password Reset)
- Dashboard (Navigation, Reporting Widgets)
- Create Account Page (Registration, Email Verification)
- A/B Testing Campaign (Campaign Setup, Goal Definition, Variant Management, Reporting)

✓ Types of Testing:

- Manual Testing (UI/UX, Functional, Usability)
- Automated Testing (Smoke, Regression)
- Performance Testing (Load time, Script execution)
- Accessibility Testing (WCAG 2.1 compliance)

✓ Environments:

- Browsers: Chrome, Firefox, Safari, Edge (latest two versions)
- OS: Windows 10/11, macOS Ventura/Sonoma, Ubuntu 22.04
- Devices: Desktop, Laptop, Tablet, Mobile (Responsive Testing)

✓ Evaluation Criteria:

- Functional correctness (bug-free experience)
- Campaign success validation (accurate metrics, variant behavior)
- System response time & performance
- Accessibility score
- Defect density and resolution time

✓ Team Roles and Responsibilities:

Role	Responsibility
QA Lead	Define test strategy, review cases, manage cycle
QA Engineers	Execute test cases, log bugs, retest fixes
Developers	Fix defects, support root cause analysis
Automation QA	Maintain test suites and CI pipelines
Product Owner	Prioritize test scope and approve deliverables

3. Inclusions

- **Introduction:** Testing all major user journeys in app.vwo.com
 - **Test Objectives:**
 - Validate critical user flows
 - Identify and report bugs and regressions
 - Ensure user experience across devices and browsers
 - Validate tracking and performance of A/B test setups
-

4. Exclusions

- Backend infrastructure-level load balancing
 - API-level penetration testing (handled by security audit team)
 - Email deliverability post-registration (handled by DevOps)
 - Native mobile applications (if any)
-

5. Test Environments

✓ Operating Systems:

- Windows 10, Windows 11
- macOS Ventura, macOS Sonoma
- Ubuntu 22.04 LTS

✓ Browsers:

- Google Chrome (latest 2 versions)
- Mozilla Firefox (latest 2 versions)
- Microsoft Edge

- Safari (macOS and iOS)

✓ **Devices:**

- Desktop (1920x1080)
- Laptop (1366x768)
- Tablets (iPad, Android)
- Smartphones (iOS Safari, Chrome Android)

✓ **Network Connectivity:**

- Wi-Fi (50–100 Mbps)
- Simulated 4G and 3G speeds for performance testing

✓ **Hardware Requirements:**

- Min 8 GB RAM, SSD, Quad-core CPU

✓ **Security Protocols:**

- OAuth2 / JWT authentication
- HTTPS / TLS 1.2 encryption
- Secure cookie and token handling

✓ **Access Permissions:**

- Admin, Marketer, Viewer roles with role-based access testing
-

6. Defect Reporting Procedure

✓ **Defect Identification:**

- Functional mismatches
- UI/UX inconsistencies
- Performance bottlenecks
- Accessibility issues

✓ **Reporting:**

- Tool: JIRA (linked to Epics and Sprints)
- Format: Bug Title, Description, Steps to Reproduce, Severity, Priority, Screenshots/Logs
- Attach console/network logs or videos where applicable

✓ **Triage & Prioritization:**

- **Blocker (P0)** – Prevents any major functionality

- **Critical (P1)** – Major flow affected but has a workaround
- **Major (P2)** – Minor flow issues
- **Minor (P3)** – Cosmetic/UI issues

✓ **Tracking:**

- All bugs tracked via JIRA
- Daily bug triage meetings
- Status emails to stakeholders

✓ **Metrics:**

- Defect density
 - Bug turnaround time
 - Open vs resolved bug ratio
-

7. Test Strategy

✓ **Step 1: Test Case Creation**

- Test Design Techniques:
 - Equivalence Partitioning
 - Boundary Value Analysis
 - State Transition Testing
 - Decision Table Testing
 - Use Case and Exploratory Testing

✓ **Step 2: Testing Procedure**

- **Smoke Testing:** Post-deployment validation
- **Sanity Testing:** Minor change validation
- **Regression Testing:** On every stable build
- **End-to-End Testing:** Full flow coverage
- **Accessibility Testing:** Keyboard, screen reader, contrast
- **Cross-Browser & Cross-Device Testing**

✓ **Step 3: Best Practices**

- **Shift-left Testing:** Review and write tests during development
- **Risk-based Testing:** Prioritize high-impact features

- Daily sync-ups and test progress reporting
 - Maintain traceability matrix
-

8. Test Schedule

Task	Duration	Timeline
Requirement Analysis	2 days	May 4–5, 2025
Test Plan Preparation	1 day	May 6, 2025
Test Case Writing	3 days	May 7–9, 2025
Environment Setup	1 day	May 10, 2025
Test Execution	5 days	May 11–15, 2025
Bug Fixing & Retesting	3 days	May 16–18, 2025
Test Closure & Reporting	1 day	May 19, 2025

9. Test Deliverables

- Test Plan Document
 - Test Scenarios and Test Cases (Manual + Automated)
 - Bug Reports
 - Daily and Weekly QA Status Reports
 - Final Test Summary Report
-

10. Entry and Exit Criteria

✓ Requirement Analysis

- **Entry:** Finalized user stories and designs
- **Exit:** All clarifications resolved, test scenarios created

✓ Test Execution

- **Entry:** Staging environment ready, test cases approved
- **Exit:** 95% test case pass rate, no open P0/P1 defects

✓ Closure

- **Entry:** All tests executed and closed
 - **Exit:** Final report signed off by QA Lead and Product Owner
-

11. Tools

Purpose	Tool
Test Management	TestRail / Zephyr
Defect Tracking	JIRA
Screenshots & Logs	Snipping Tool, Loom
Accessibility	Axe, Lighthouse
Automation	Cypress / Playwright
Browser Testing	BrowserStack

12. Risks and Mitigations

Risk	Mitigation
Delayed build deployments	Buffer time in test schedule
Lack of test data	Generate synthetic data using automation
Frequent UI changes	Update test cases dynamically
Limited access to devices	Use cloud platforms like BrowserStack
Overlapping sprints	Cross-squad coordination

13. Approvals

Document	Owner	Approver
Test Plan	QA Lead	Product Owner
Test Cases	QA Team	QA Lead
Final QA Report	QA Lead	Project Stakeholders
